AND Continue charging for calls as before

REMOVAL OF BT METER PULSE FACILITY PROBLEM

For some years now BT has not been supplying new line connections with billing Meter Pulses. Now BT is removing the Meter Pulse Facility (MPF), causing billing disruption in Hotel Front Office Computer Systems.

THE MP-7 HOTEL COMPUTER INTERFACE SOLUTION

Cubix has developed a simple and reliable solution to this problem. The Cubix Hotel Computer Telephone Billing Interface, **MP-7**.

MP-7 works by taking the call information without Meter Pulses (CDR) from the PBX telephone system and adding the correct number of Meter Pulses for the call before sending it to the Front Office computer.

In this way calls continue to be priced as before, without any disruption. Simple and efficient.

ADDED SECURITY AND ALARMS

MP-7 automatically makes backup files of all the billing information. It also keeps track of calls that have been sent to the front Office Computer.

Popup or Email Alarms are generated if call information is missing from the Telephone System.

MP-7 Compatibility

The Cubix MP-7 is compatible with all new, old and legacy PBXs and VOiP telephone systems. Connection to multiple and different makes of telephone systems is also possible
